EDUCATION

- **B.Tech, Computer Science and Engineering** — VIT-AP University **2022 – 2026 | CGPA: 8.50**
- **Senior Secondary (CBSE) – 12th Grade** **2022 | 79%**
- **Secondary (CBSE) – 10th Grade** **2020 | 86.9%**

TECHNICAL SKILLS

- **Languages:** Python, C#, JavaScript / TypeScript
- **Frameworks & Tools:** .NET Core, Angular, LangChain, LangGraph, PyTorch, Git, VS Code, SSMS
- **Cloud & Databases:** Azure (AI Search, OpenAI, Function Apps, Doc Intelligence), AWS, SQL Server, MongoDB
- **AI & LLM:** RAG Pipelines, Prompt Engineering, LLM Orchestration, Agentic AI Workflows, Vector Embeddings
- **Core Competencies:** RESTful APIs, Full Stack Development, Software Design Patterns, Agile / Jira

WORK EXPERIENCE

INTERN — hy: Tech and Consulting, Bangalore, Karnataka

Late Jan 2026 – Present

- Owned the **Therapy Grouping** Azure Function — parses DOCX reports into body-part Fragment objects, groups across 3-month rolling windows, and calls LLM models via API request with a strictly extractive prompt (inference explicitly prohibited); outputs grouped DOCX files written to Azure Blob Storage on a 5-minute schedule.
- Built the **Realtime Summarizer** API (FastAPI) with sync and SSE streaming endpoints; 5-layer DB-driven prompt pipeline (base -> summary -> format -> output -> report-type), coordinate-based header/footer stripping via pdfplumber, and 3-stage HTML sanitization to prevent boilerplate from corrupting model context.
- Rewrote the **Sorter Module's** prompt_builder.py (+363/-360 lines) — classification rules, date disambiguation, and address noise filtering — then replaced ~295 hardcoded instruction lines with a DB-driven singleton cache; built the Angular admin configuration screen (lazy-loaded module, Express + SQL) and refactored resummarization change-detection from 165 → 58 lines using a normalized string diff to eliminate rich-text editor false positives.
- Led a **RAG PoC** for few-shot classification on 255k subtasks: pdfplumber + Ollama embeddings (768d) into Qdrant; implemented client-scoped retrieval, cold-start guards, and 800-token budget context injection

PROJECTS

Gray Zone: Full Stack Gamestore Application

- Engineered **RESTful APIs** using ASP.NET Core with asynchronous CRUD operations and input validation to ensure robust data handling.
- Applied **Entity Framework Core**, repository-style patterns, and configuration-driven services.
- Migrated frontend to **Angular 21** — lazy-loaded feature modules, **RxJS BehaviorSubject** state management, and **Angular Material** components for catalog, cart, and checkout using Claude Code.
- Integrated frontend–backend via **HttpClient**, using async patterns and clean separation of concerns.

RAG-Based PDF Insight Generator

- Developed a **local AI-powered PDF summarizer** using **LangChain**, **LangGraph**, and **Ollama**
- Designed a **RAG** pipeline to chunk PDFs, embed content, and retrieve contextually relevant sections.
- Implemented **LangGraph-based workflow routing** to dynamically switch between full summary, section-wise summarization

LEADERSHIP EXPERIENCE

LEAD — Deep Learning Team, Machine Learning Club, VIT-AP

Sept 2024 – Aug 2025

- Successfully managed a team of 9 members, oversaw 2 research paper projects and actively contributed to one
- Developed "Minecraft Survival Showdown," a project utilizing Computer Vision and Deep Learning to boost club engagement among **200+ participants**.
- Mentored team members and produced explanatory technical blogs based on different Deep learning concepts.

CERTIFICATIONS [Link](#)

- **AWS Certified Solutions Architect – Associate**
- **OCI 2025 Certified Generative AI Professional**
- Coursera Machine Learning Specialization
- Coursera Amazon Junior Software Developer
- Postman API Fundamentals Student Expert
